

## Untangling Tanghulic (10 marks)

*As you may know, languages form “families” in which languages descended from a common ancestor (ancient language) show systematic similarities and differences. For example English, Dutch and Danish are all from the same language family, and the systematic difference can be seen in the words for brother, mother, father in Dutch (broeder, moeder, vader) and Danish (bror, mor, far). The French words frère, mère and père are also (more distantly) related, and show slightly more complex differences. This problem concerns Kachai, Tusom, and Ukhul, which are three languages from the Tanghulic subfamily of the Tibeto-Burman family of languages. They are spoken in Manipur state, India.*

The words from these languages that are given here form 20 sets of three that are descended from the same word in the shared ancestor of the three languages. The Ukhul words are given with their English translations. The Kachai and Tusom words are given in no particular order.

**Q2.** Link the Kachai words a-t and the Tusom words A-T to their Ukhul equivalent 1-20.

Pronunciation notes:

- The small raised h symbol indicates that the preceding consonant is aspirated, i.e. pronounced with an exaggerated puff of air.
- ŋ represents a velar nasal, the ‘ng’ sound in a word like *sing*.
- ʔ is a glottal stop, the sound between the two syllables of the expression *uh oh*.
- ð is the ‘th’ sound at the beginning of this.
- x is pronounced like ‘ch’ in German *Bach* or Scottish *loch*.
- c is pronounced like ‘ch’ in *church*.
- j is the ‘y’ sound in *yes* (rather than the ‘j’ sound in *jam*).
- ə represents a schwa vowel like the first sound of the word *approach*.
- ɐ represents a vowel somewhere between the ‘a’ in *cat* and the ‘o’ in *cot*.
- u is a vowel pronounced like ‘oo’ in *book*, but with spread lips, a bit like when you show distaste *ugh*.
- ɤ is a nasal vowel, similar to the sequence ən.
- ʃ is the ‘sh’ sound in *ship*.
- y is a vowel equivalent to a fronted [u], like French *u* or German *ü*.
